EDUCATION

Texas A&M University

Bachelor of Science in Computer Science, Minor in Statistics: GPA: 3.77

College Station, TX

Aug. 2023 – Present (Grad: Dec 2026)

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, Swift, SQL, R, HTML/CSS

Frameworks/Libraries: React, Flask, Node.js, OpenCV, NumPy, pandas, Selenium, BeautifulSoup, Matplotlib

Developer Tools: Git, Docker, MongoDB, Azure, REST APIs, CI/CD, TDD, Agile/Kanban

Courses: Data Structures and Algorithms, Database Systems, Artificial Intelligence, Machine Learning

EXPERIENCE

Microsoft

May 2026 - Aug. 2026

Software Engineering Intern

Redmond, WA

- Designed and prototyped a self-serve CI/CD schema deployment system for Microsoft Graph, replacing a biweekly shared rollout with per-workload, independently gated pipelines and cutting deployment wait from **up to 4 days to on-demand for 200 workload teams**.
- Automated cross-workload aggregation gating and dependency-aware rollback handling, enabling continuous conflict-safe schema deployment while preserving merge correctness and rollout ordering.
- Removed the onboarding team as a deployment bottleneck by decoupling workload teams onto independent ring pipelines, eliminating an estimated **900+ days of cumulative deployment waiting per year** across workload teams.

Microsoft

May 2025 - Aug. 2025

Software Engineering + Product Management Intern

Redmond, WA

- Developed a customer-facing **Least Privilege Recommender** in the Microsoft Entra portal that analyzes usage patterns and suggests minimal access, reducing identity attack surface and administrative overhead for enterprise IT teams.
- Implemented **test-driven development (TDD)** with unit and integration tests to ensure recommender accuracy and prevent privilege escalation bugs before production.
- Integrated **Azure OpenAI** and **Semantic Kernel** to automate privilege analysis, cutting manual audit time from hours to minutes for security administrators.
- Delivered an end-to-end **POC** approved for production roadmap, projected to reduce over-privileged access across thousands of enterprise tenants.

TAMU RoboMasters Computer Vision Team

Sept. 2024 - Feb. 2025

Team Member

College Station, TX

- Developed computer vision algorithms to detect enemy armor plates with **90%** accuracy and classify frames in **30ms**, enabling real-time auto-aim and battlefield localization for the competition robot.
- Collaborated using **Git** and **CI/CD** pipelines to build, test, and deploy vision capabilities, ensuring reliable performance during high-stakes matches.

PROJECTS

Pupil - Agentic AI Shadowing Framework | Python, Claude API, Playwright, ChromaDB

Feb. 2026

- Building an AI agent framework that shadows engineers during live workflows and autonomously executes repetitive tasks, reducing operational toil and onboarding time for engineering teams.
- Architected a cost-aware, multi-agent learning pipeline with structured context modeling to enable scalable, human-in-the-loop automation.

CORTEX - Complete Travel Ecosystem | Swift, OpenCV, MongoDB, ARkit, CoreML

January 2026

- Built a smart travel assistant using **Computer Vision** and **AR** to help travelers track personal items and navigate airports via a 3D terminal view, reducing recovery time and travel stress.
- Developed a **sub-2s** latency voice agent integrated with airline **REST APIs** to deliver instant gate and flight updates, improving real-time communication for passengers.

LLM Rate My Professor | Google Gemini/PaLM API, Python, Selenium, Flask, HTML, CSS

Dec. 2023

- Built a **full-stack** web app that scrapes and summarizes professor reviews using **Google's Gemini LLM**, saving students hours of manual research during course registration.

Ember - Fire Damage Visualizer | Python, Flask, React, Plotly, OpenAI API, REST-API

Jan. 2025

- Built a **full-stack** app (**Flask** back-end, **React** front-end) consuming government **REST APIs** and **OpenAI API** to visualize LA fire damage on an interactive dashboard, helping residents and insurers assess property impact and expedite recovery decisions.

ACHIEVEMENTS

1st Place: TAMUHack 2026 Hackathon (650+ competitors.)

1st Place: Notion-API Texas A&M Computing Society Build4Good 2025 Hackathon

2nd Place: ARM challenge TAMUHack 2025 Hackathon

Top 20: Among 500 teams Headstarter Hiring Hackathon 2025
