EDUCATION

Texas A&M University

Bachelor of Science in Computer Science, Minor in Statistics: GPA: 3.77

College Station, TX

Aug. 2023 – Present (Grad: 2027)

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, Swift, SQL, R, HTML/CSS

Frameworks/Libraries: React, Flask, Node.js, OpenCV, NumPy, pandas, Selenium, BeautifulSoup, Matplotlib

Developer Tools: Git, Docker, MongoDB, Azure, REST APIs, CI/CD, Agile/Kanban

Courses: Data Structures and Algorithms, Database Systems, Artificial Intelligence, Machine Learning

EXPERIENCE

Microsoft

May 2026 - Aug. 2026

Software Engineering Intern

Redmond, WA

- Designed and prototyped a self-serve schema deployment system for Microsoft Graph, replacing a biweekly shared rollout with per-workload, independently gated pipelines and cutting deployment wait from **up to 4 days to on-demand for 200 workload teams**.
- Automated cross-workload aggregation gating and dependency-aware rollback handling, enabling continuous conflict-safe schema deployment while preserving merge correctness and rollout ordering.
- Removed the onboarding team as a deployment bottleneck by decoupling workload teams onto independent ring pipelines, eliminating an estimated **900+ days of cumulative deployment waiting per year** across workload teams.

Microsoft

May 2025 - Aug. 2025

Software Engineering + Product Management Intern

Redmond, WA

- Designed and developed a customer-facing **Least Privilege Recommender** in the Microsoft Entra portal to enhance **identity security** and reduce **over-privileged access**.
- Collaborated with senior engineers through **code reviews** and **Agile** sprints, iterating on feedback to align deliverables with customer needs.
- Integrated **Azure OpenAI** and **Semantic Kernel** cloud services to build an LLM-powered back-end pipeline automating privilege analysis.
- Delivered end-to-end **POC** in a **Kanban**-driven workflow, presenting to stakeholders and receiving approval for production roadmap.

TAMU RoboMasters Computer Vision Team

Sept. 2024 - Feb. 2025

Team Member

College Station, TX

- Collaborated in a team using **Git** to develop computer vision capabilities including auto-aim, localization, and icon detection for RoboMasters competition.
- Built computer vision algorithms to detect numbers on enemy armor plates with a **90%** accuracy rate.
- Optimized algorithm to compute classification for a frame in **30ms**, a **22%** decrease in computation time compared to previous method.

PROJECTS

Pupil - Agentic AI Shadowing Framework | Python, Claude API, Playwright, ChromaDB

Feb. 2026

- Developing an AI agent framework that shadows engineers during live workflows, learns operational patterns, and autonomously executes tasks.
- Architected a multi-phase, multi-agent learning pipeline with structured context modeling and cost-aware LLM orchestration to enable scalable, human-in-the-loop automation.

CORTEX - Complete Travel Ecosystem | Swift, OpenCV, MongoDB, Arkit, CoreML

January 2026

- Placed **1st Place** at TAMUHack (Over 650 participants).
- Built a smart travel assistant using **Computer Vision** and **AR** pipeline to track personal items and luggage in airports, guiding users back via a 3D terminal view.
- Developed a **low-latency** voice agent with **sub-2s** responses using **Gemini 2.0 Flash + ElevenLabs**, integrated with airline **REST APIs** for instant gate and flight info.

LLM Rate My Professor | Google Gemini/PaLM API, Python, Selenium, Flask, HTML, CSS

Dec. 2023

- Built a **full-stack** web app with a **Flask back-end** that scrapes Rate My Professor reviews via Selenium and summarizes them using **Google's Gemini LLM API**.

Ember - Fire Damage Visualizer | Python, Flask, React, Plotly, OpenAI API, REST-API

Jan. 2025

- Placed **2nd place** in ARM challenge at TAMUHack.
- Built a **full-stack** app (**Flask** back-end, **React** front-end) consuming government **REST APIs** and **OpenAI API** to visualize LA fire damage on an interactive Plotly dashboard.

ACHIEVEMENTS

1st Place: TAMUHack 2026 Hackathon (650+ competitors.)

1st Place: Notion-API Texas A&M Computing Society Build4Good 2025 Hackathon

2nd Place: ARM challenge TAMUHack 2025 Hackathon

Top 20: Among 500 teams Headstarter Hiring Hackathon 2025
