EDUCATION

Texas A&M University

Bachelor of Science in Computer Science, Minor in Statistics: GPA: 3.77

College Station, TX

Aug. 2023 – Present (Grad: 2027)

TECHNICAL SKILLS

Languages: Python, C++, C, Java, JavaScript, TypeScript, Swift, SQL, Bash, HTML/CSS

Automation & Testing: pytest, unittest, Selenium, Playwright, Git, CI/CD, GitHub Actions, Docker, REST APIs

Hardware & Embedded: OpenCV, Computer Vision pipelines, sensor data processing, object-oriented design, Linux

Data Visualization: Plotly, Matplotlib, NumPy, pandas

Courses: Data Structures & Algorithms, Database Systems, Operating Systems, Artificial Intelligence, Machine Learning

EXPERIENCE

Microsoft

May 2026 - Aug. 2026

Software Engineering Intern

Redmond, WA

- Incoming SWE Intern; will work on MS Graph pipeline team to build data processing and automation tools.

Microsoft Explore

May 2025 - Aug. 2025

Software Engineering + Product Management Intern

Redmond, WA

- Designed and developed a customer-facing **Least Privilege Recommender** in the Microsoft Entra portal to enhance **identity security** and reduce **over-privileged access**.
- Built and tested an **automated Python** back-end pipeline integrating **Azure OpenAI** and **Semantic Kernel**, validated through **pytest** unit tests in a **CI/CD** workflow.
- Collaborated with senior engineers through **Git-based code reviews** and **Agile** sprints, iterating on feedback in a fast-paced environment.
- Delivered end-to-end **POC** in a **Kanban-driven** workflow, presenting to stakeholders and receiving approval for production roadmap.

TAMU RoboMasters Computer Vision Team

Sept. 2024 - Feb. 2025

Software Team Member – Embedded Vision & Automation

College Station, TX

- Developed **C++** and **Python** computer vision modules (auto-aim, localization, icon detection) for an autonomous robot, validated via **automated test scripts** running on real hardware.
- Built a classification algorithm detecting numbers on enemy armor plates at **90%** accuracy, debugging **hardware interfacing** issues (camera feeds, sensor sync) on the test bench as they arose.
- Optimized the per-frame inference pipeline to **30ms** – a **22%** reduction – and used **Git** branching with peer code reviews to ship changes safely across the team.

PROJECTS

Pupil - Agentic Automation Framework | Python, Claude API, Playwright, ChromaDB

Feb. 2026

- Building a **Python** agent framework that shadows engineers during live workflows, learns operational patterns, and autonomously executes repetitive tasks.
- Architected a multi-phase, multi-agent pipeline with structured context modeling and **LLM orchestration** for scalable, human-in-the-loop test and workflow automation.

CORTEX - Complete Travel Ecosystem | Swift, OpenCV, MongoDB, ARkit, CoreML

January 2026

- Placed **1st Place** at TAMUHack (Over 650 participants).
- Built a smart travel assistant using **Computer Vision** and **AR** pipeline to track personal items and luggage in airports, guiding users back via a 3D terminal view.
- Developed a **low-latency** voice agent with **sub-2s** responses using **Gemini 2.0 Flash + ElevenLabs**, integrated with airline **REST APIs** for instant gate and flight info.

LLM Rate My Professor | Google Gemini/PaLM API, Python, Selenium, Flask, HTML, CSS

Dec. 2023

- Built a **full-stack** web app with a **Flask back-end** that scrapes Rate My Professor reviews via Selenium and summarizes them using **Google's Gemini LLM API**.

Ember - Damage & Telemetry Visualizer | Python, Flask, React, Plotly, OpenAI API, REST APIs

Jan. 2025

- Placed **2nd place** in ARM challenge at TAMUHack.
- Built a **full-stack** app (**Flask** back-end, **React** front-end) consuming **REST APIs** to render an interactive **Plotly dashboard** – the same visualization pattern used for surfacing test results and telemetry data.

FindMoto - Automated Data Pipeline | Python, pytest, Selenium, Notion API, CronJob, CI/CD

July 2024

- Placed **1st Place** in TACS Hackathon.
- Built a **Python automation script** with object-oriented modules that scrapes, structures, and syncs motorcycle deals into a **Notion API** database on a scheduled **CronJob**, with **pytest** unit tests covering scrape and sync logic.

ACHIEVEMENTS

1st Place: TAMUHack 2026 Hackathon (650+ competitors.)

1st Place: Notion-API Texas A&M Computing Society Build4Good 2025 Hackathon

2nd Place: ARM challenge TAMUHack 2025 Hackathon

Top 20: Among 500 teams Headstarter Hiring Hackathon 2025
