EDUCATION

Texas A&M University

Bachelor of Science in Computer Science, Minor in Statistics: GPA: 3.77

College Station, TX

Aug. 2023 – Present (Grad: 2027)

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, Swift, SQL, R, HTML/CSS

Frameworks/Libraries: Flask, React, Node.js, OpenCV, NumPy, pandas, Selenium, BeautifulSoup, Matplotlib

Developer Tools: Git, Docker, Linux, REST APIs, PostgreSQL, MongoDB, Azure, CI/CD, Agile/Kanban

Courses: Data Structures and Algorithms, Database Systems, Operating Systems, Computer Architecture, Artificial Intelligence, Machine Learning

EXPERIENCE

Microsoft

May 2026 - Aug. 2026

Software Engineering Intern

Redmond, WA

- To be completed Summer 2026

Microsoft Explore

May 2025 - Aug. 2025

Software Engineering + Product Management Intern

Redmond, WA

- Designed and shipped a customer-facing **Least Privilege Recommender** feature in the Microsoft Entra portal, strengthening **identity security** for enterprise customers across the cloud.
- Built a scalable **Python back-end pipeline** integrating **Azure OpenAI** and **Semantic Kernel** to automate privilege analysis across high-volume identity data.
- Designed clean **REST APIs** to expose privilege analysis results to front-end clients with low-latency, high-reliability responses.
- Collaborated with senior engineers via **code reviews** and **Agile/Kanban** sprints, delivering an end-to-end **POC** approved by stakeholders for production roadmap.

TAMU RoboMasters Computer Vision Team

Sept. 2024 - Feb. 2025

Computer Vision Engineer

College Station, TX

- Developed cutting-edge **computer vision** pipelines (auto-aim, localization, icon detection) in C++/Python for the international RoboMasters competition, collaborating across a multi-team codebase via **Git**.
- Built CV algorithms to detect numbers on enemy armor plates with a **90%** accuracy rate under live combat conditions.
- Optimized image classification to **30ms** per frame (**22%** latency reduction), enabling **low-latency, high-throughput** real-time targeting.

PROJECTS

Pupil - Agentic AI Shadowing Framework | Python, Claude API, Playwright, ChromaDB, Docker

Feb. 2026

- Developing a **Python** agent framework that shadows engineers during live workflows, learns operational patterns, and autonomously executes tasks via a containerized **microservice** back-end.
- Architected a multi-phase, multi-agent learning pipeline with **ChromaDB** vector storage, structured context modeling, and cost-aware LLM orchestration for scalable, human-in-the-loop automation.

CORTEX - Complete Travel Ecosystem | Swift, Python, OpenCV, MongoDB, ARKit, CoreML

January 2026

- Placed **1st Place** at TAMUHack out of 650+ participants.
- Built a smart travel assistant using a **computer vision** + **AR** pipeline to track personal items and luggage in airports, guiding users back via a 3D terminal view.
- Developed a **low-latency** voice agent with **sub-2s** end-to-end responses using **Gemini 2.0 Flash** + **ElevenLabs**, integrated with airline **REST APIs** for real-time gate and flight info.

LLM Rate My Professor | Python, Flask, Google Gemini API, Selenium, REST APIs

Dec. 2023

- Built a **Python/Flask** back-end exposing **REST endpoints** that scrape Rate My Professor reviews via Selenium and summarize them on-demand using **Google Gemini**.

Ember - Fire Damage Visualizer | Python, Flask, React, Plotly, OpenAI API, REST APIs

Jan. 2025

- Placed **2nd place** in ARM challenge at TAMUHack.
- Built a **Python/Flask** back-end consuming government **REST APIs** and the **OpenAI API**, serving processed geospatial data to a **React** client visualizing LA fire damage on an interactive Plotly dashboard.

FindMoto | Python, Notion REST API, Selenium, Linux, CronJob

July 2024

- Placed **1st Place** in TACS Build4Good Hackathon.
- Built an automated **Python** back-end service integrating the **Notion REST API** and Selenium to scrape and structure motorcycle deals, scheduled via **cron** on a **Linux** server.

ACHIEVEMENTS

1st Place: TAMUHack 2026 Hackathon (650+ competitors.)

1st Place: Notion-API Texas A&M Computing Society Build4Good 2025 Hackathon

2nd Place: ARM challenge TAMUHack 2025 Hackathon

Top 20: Among 500 teams Headstarter Hiring Hackathon 2025
